

Tallest Clothespin Tower

Supplies Needed:

- Clothespins
- Craft Sticks

Challenge:

Try to create the largest tower using only clothespins and craft sticks.

What did you learn?

What changes did you make to improve your tower?

Was your first prototype (model) the best one?

One challenge of this activity is the materials. Clothespins and craft sticks are not the strongest materials; what materials could you find at home that you think might be better?

The foundation of your tower is most important. How can you make it stronger?

Remember engineering is all about solving a problem. There may be more than one way to do this, so do not give up!
