

Day in the Life of a Bacterium

The Coloring Book

Created by Emma Treco

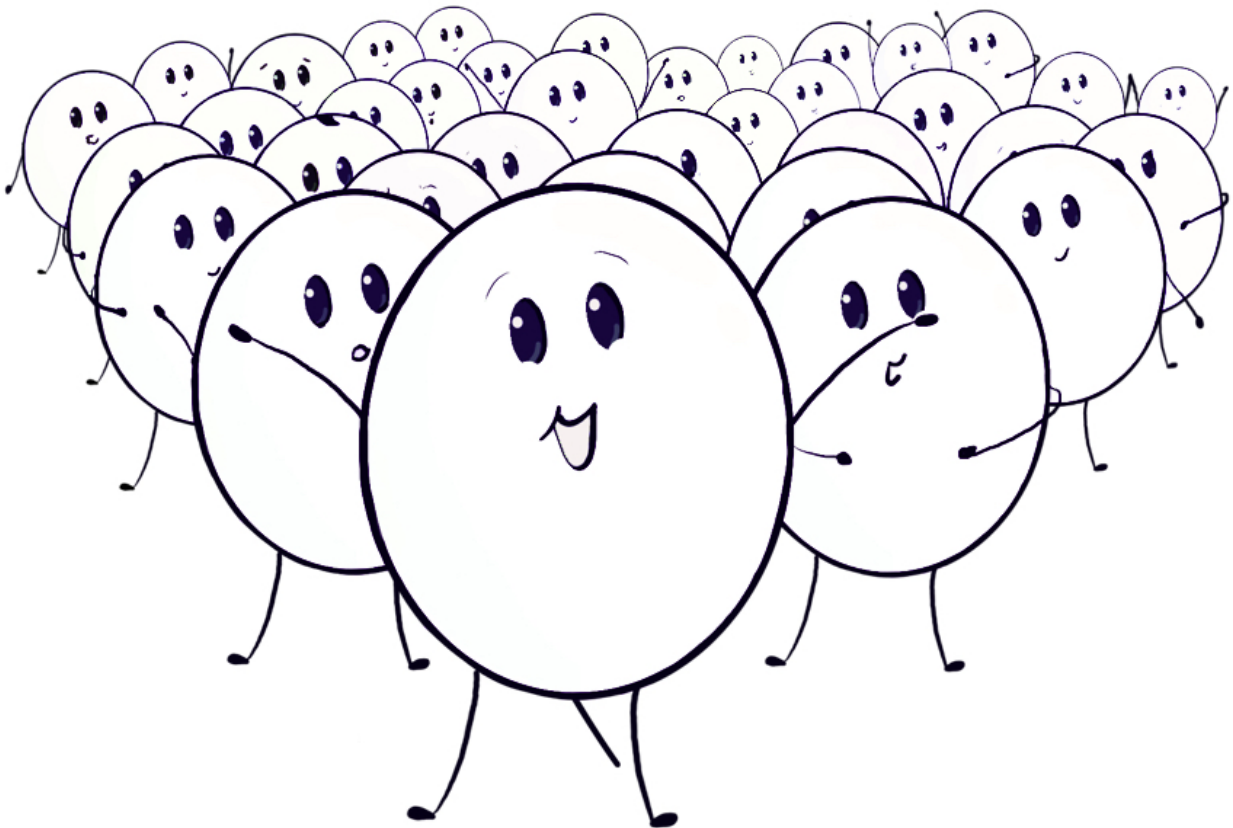

Hello, my name is
Staphylococcus Epidermidis.
staff-uh-low-cah-cus eh-peh-der-meh-diss

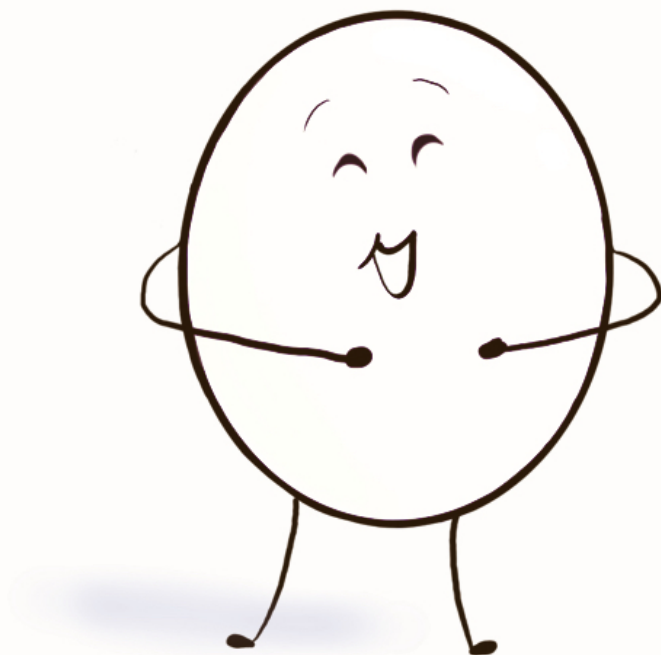

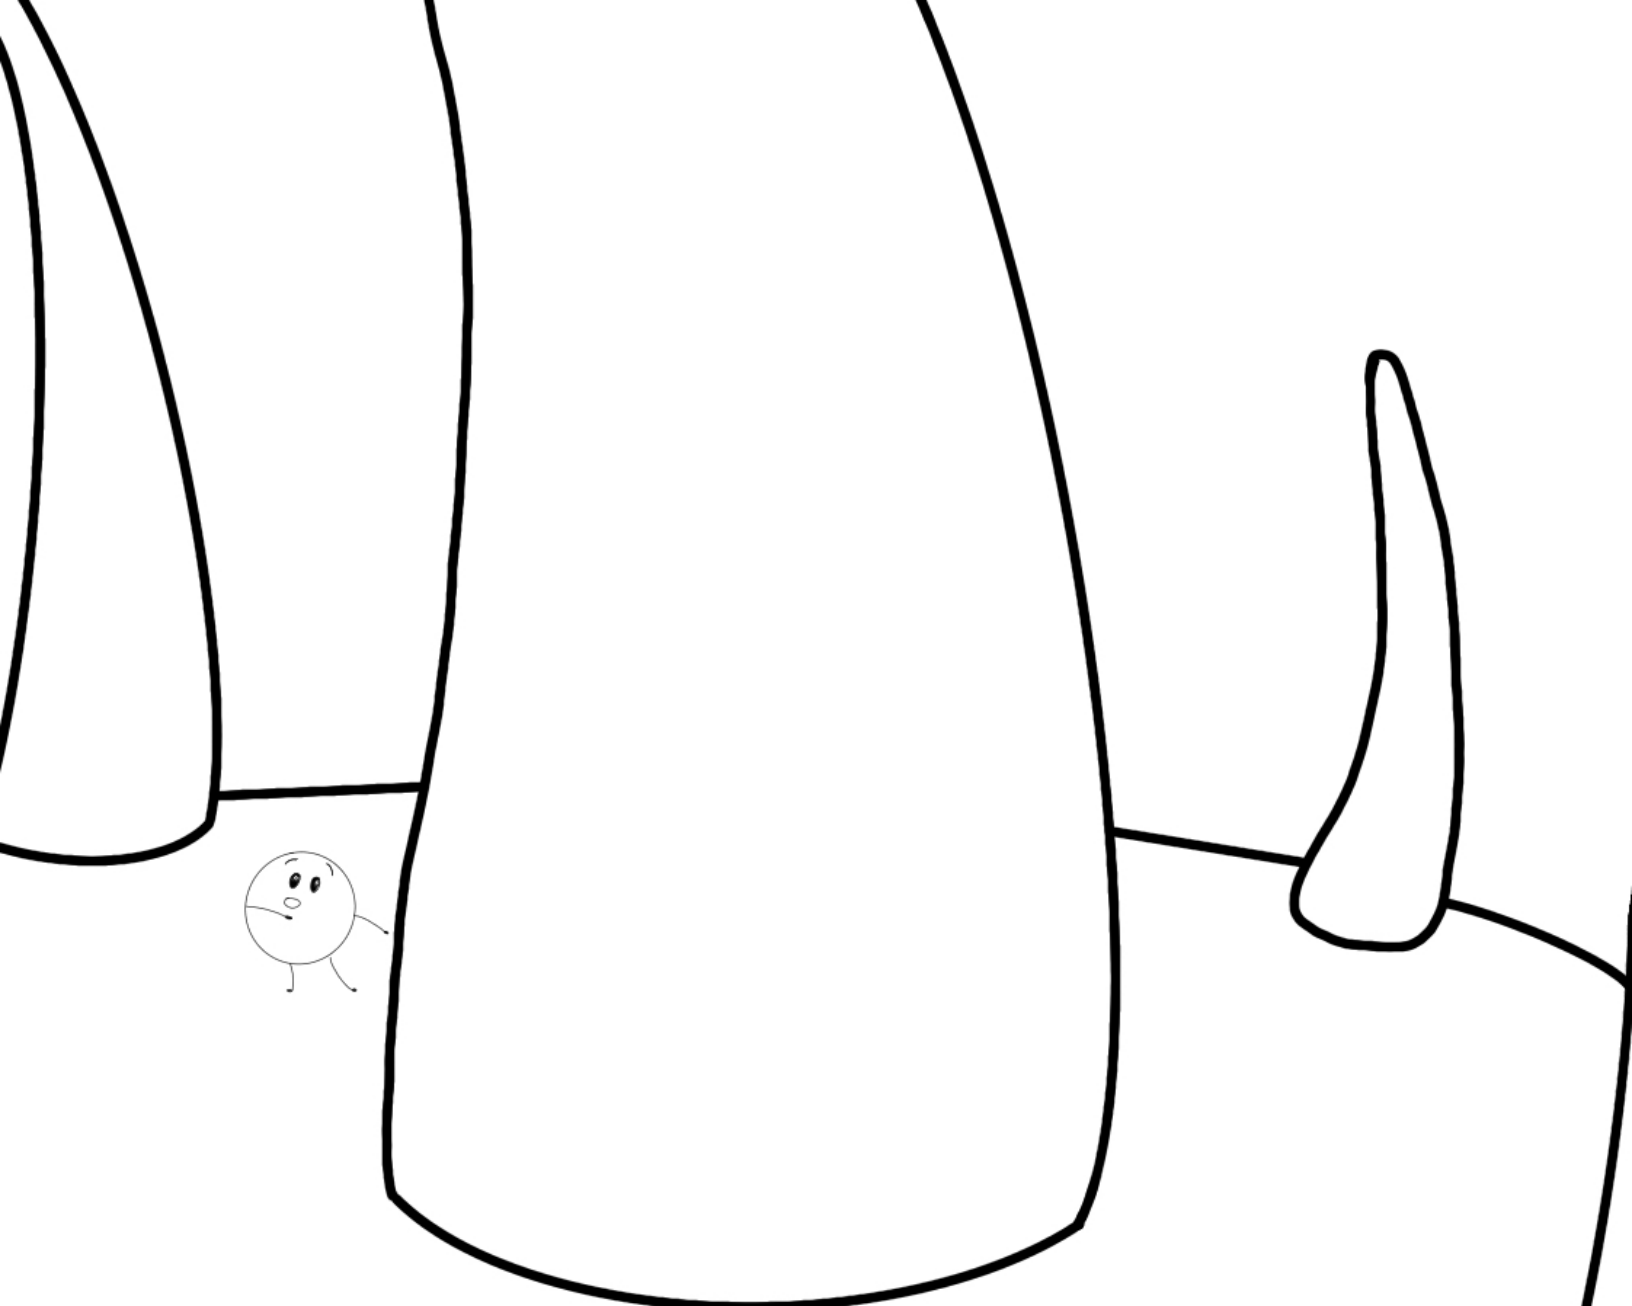

You can call me ***S. Epi***

**My family and I are
very small living things
called bacteria.**

I bet you aren't thinking
small enough! Allow me
to show you.

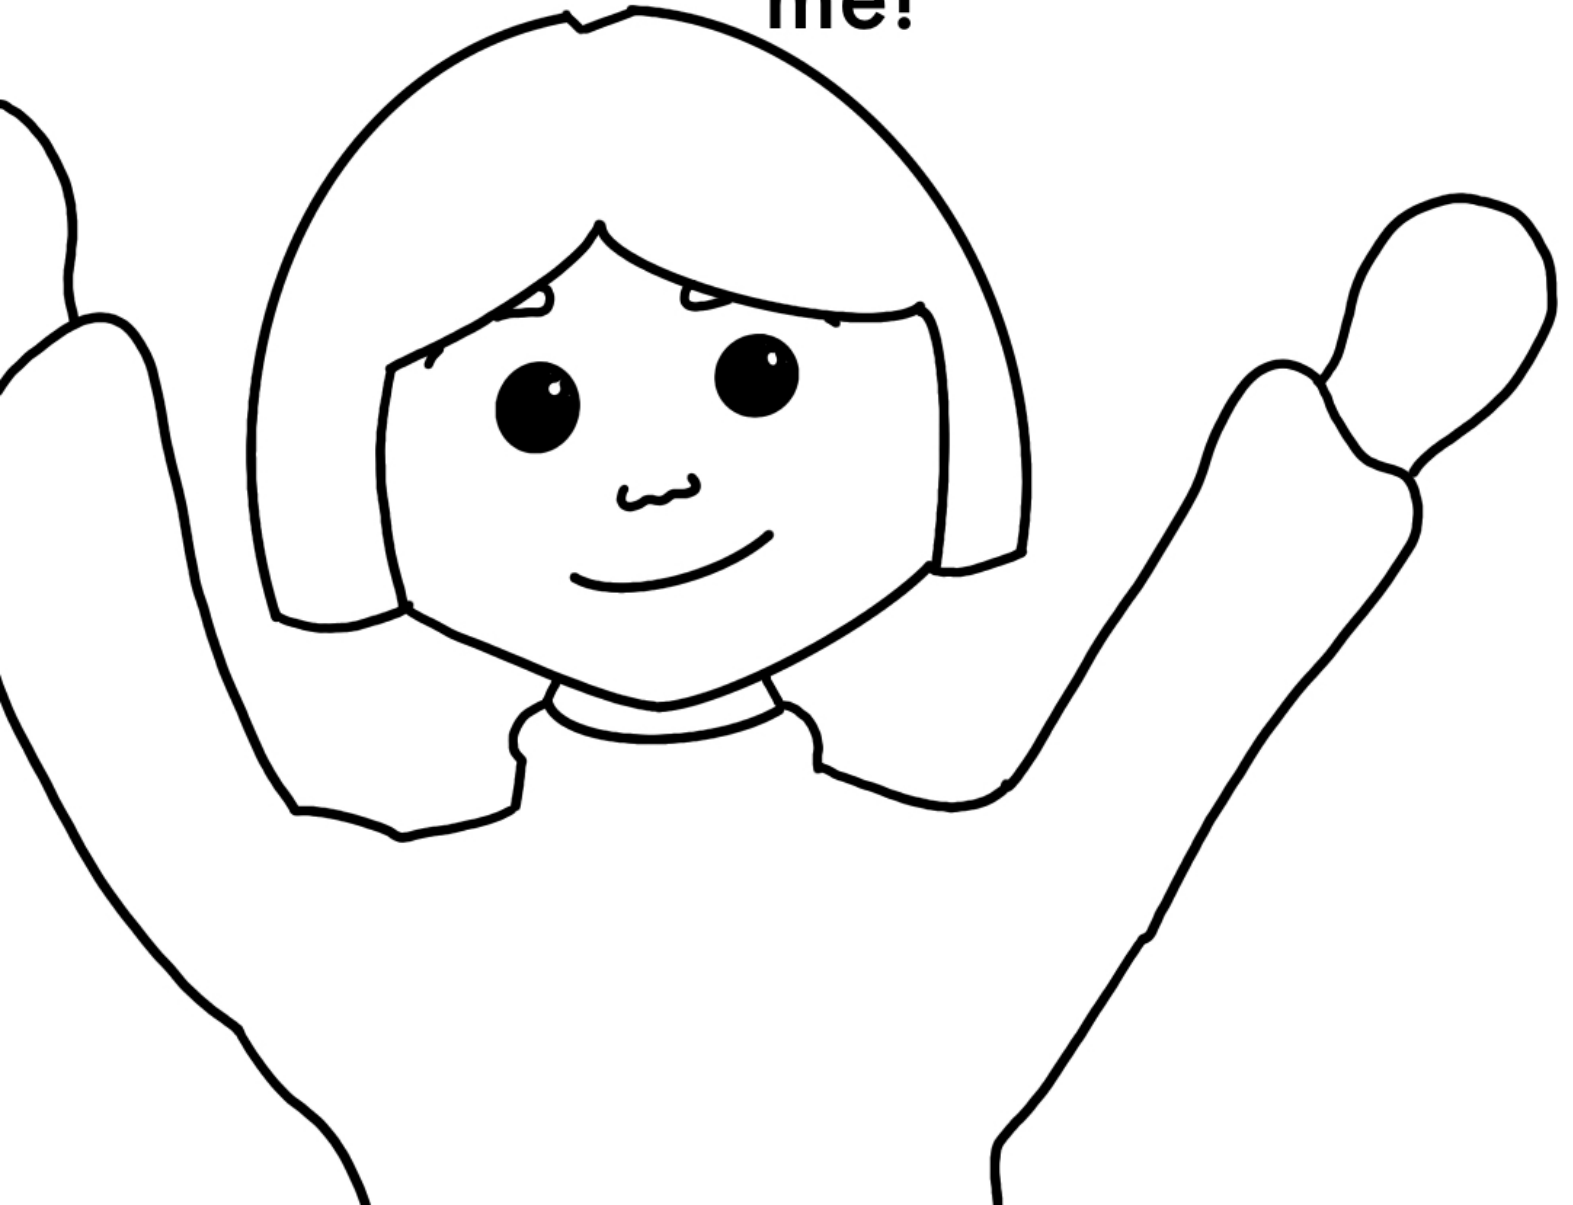

Here I am by a piece of hair.
65 of me could fit across there.

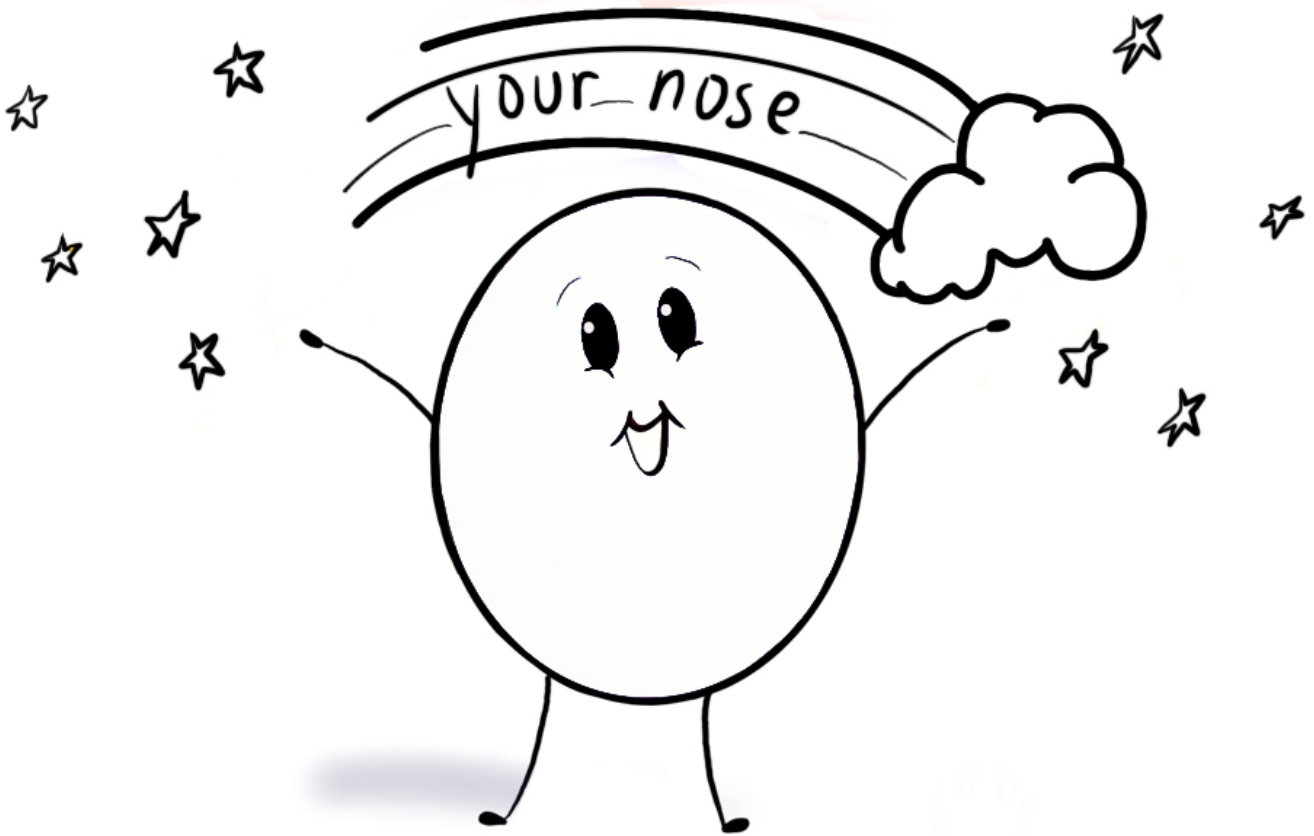

Here I am by a booger.
300 of me could fit across
there.

Here I am on someone's nose.
I'm so small you can't even see
me!

We live in a special
place called. . .

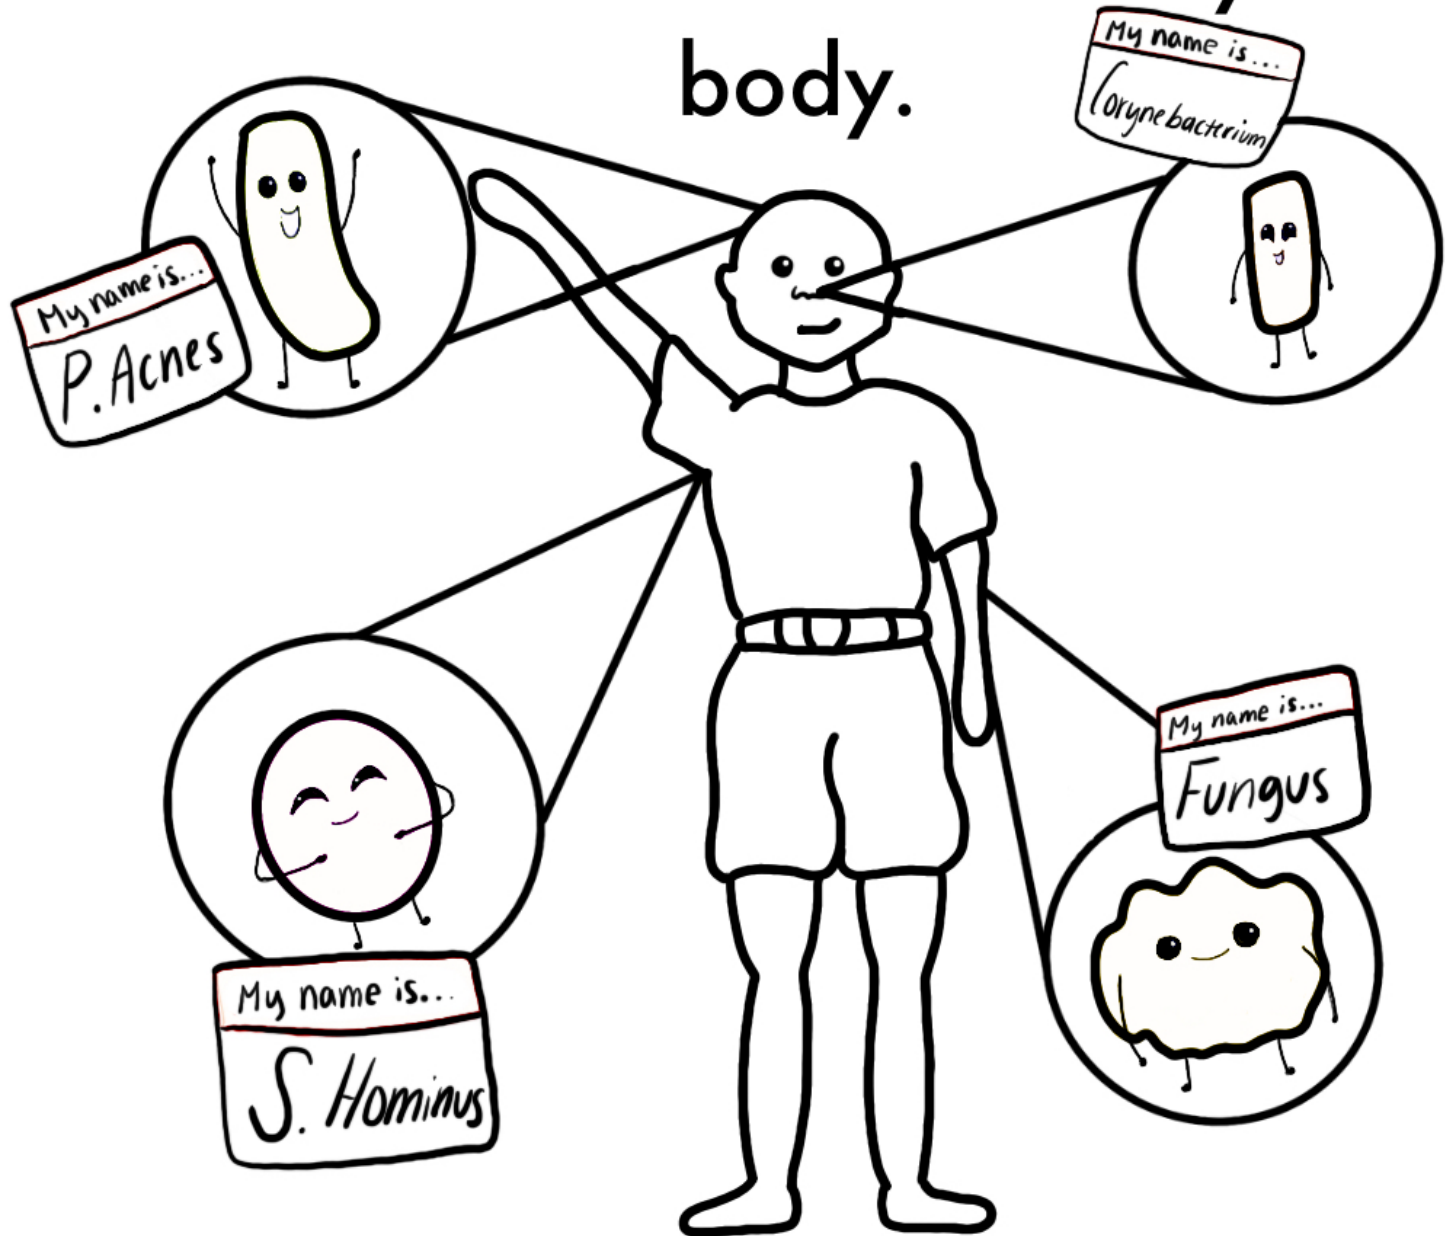

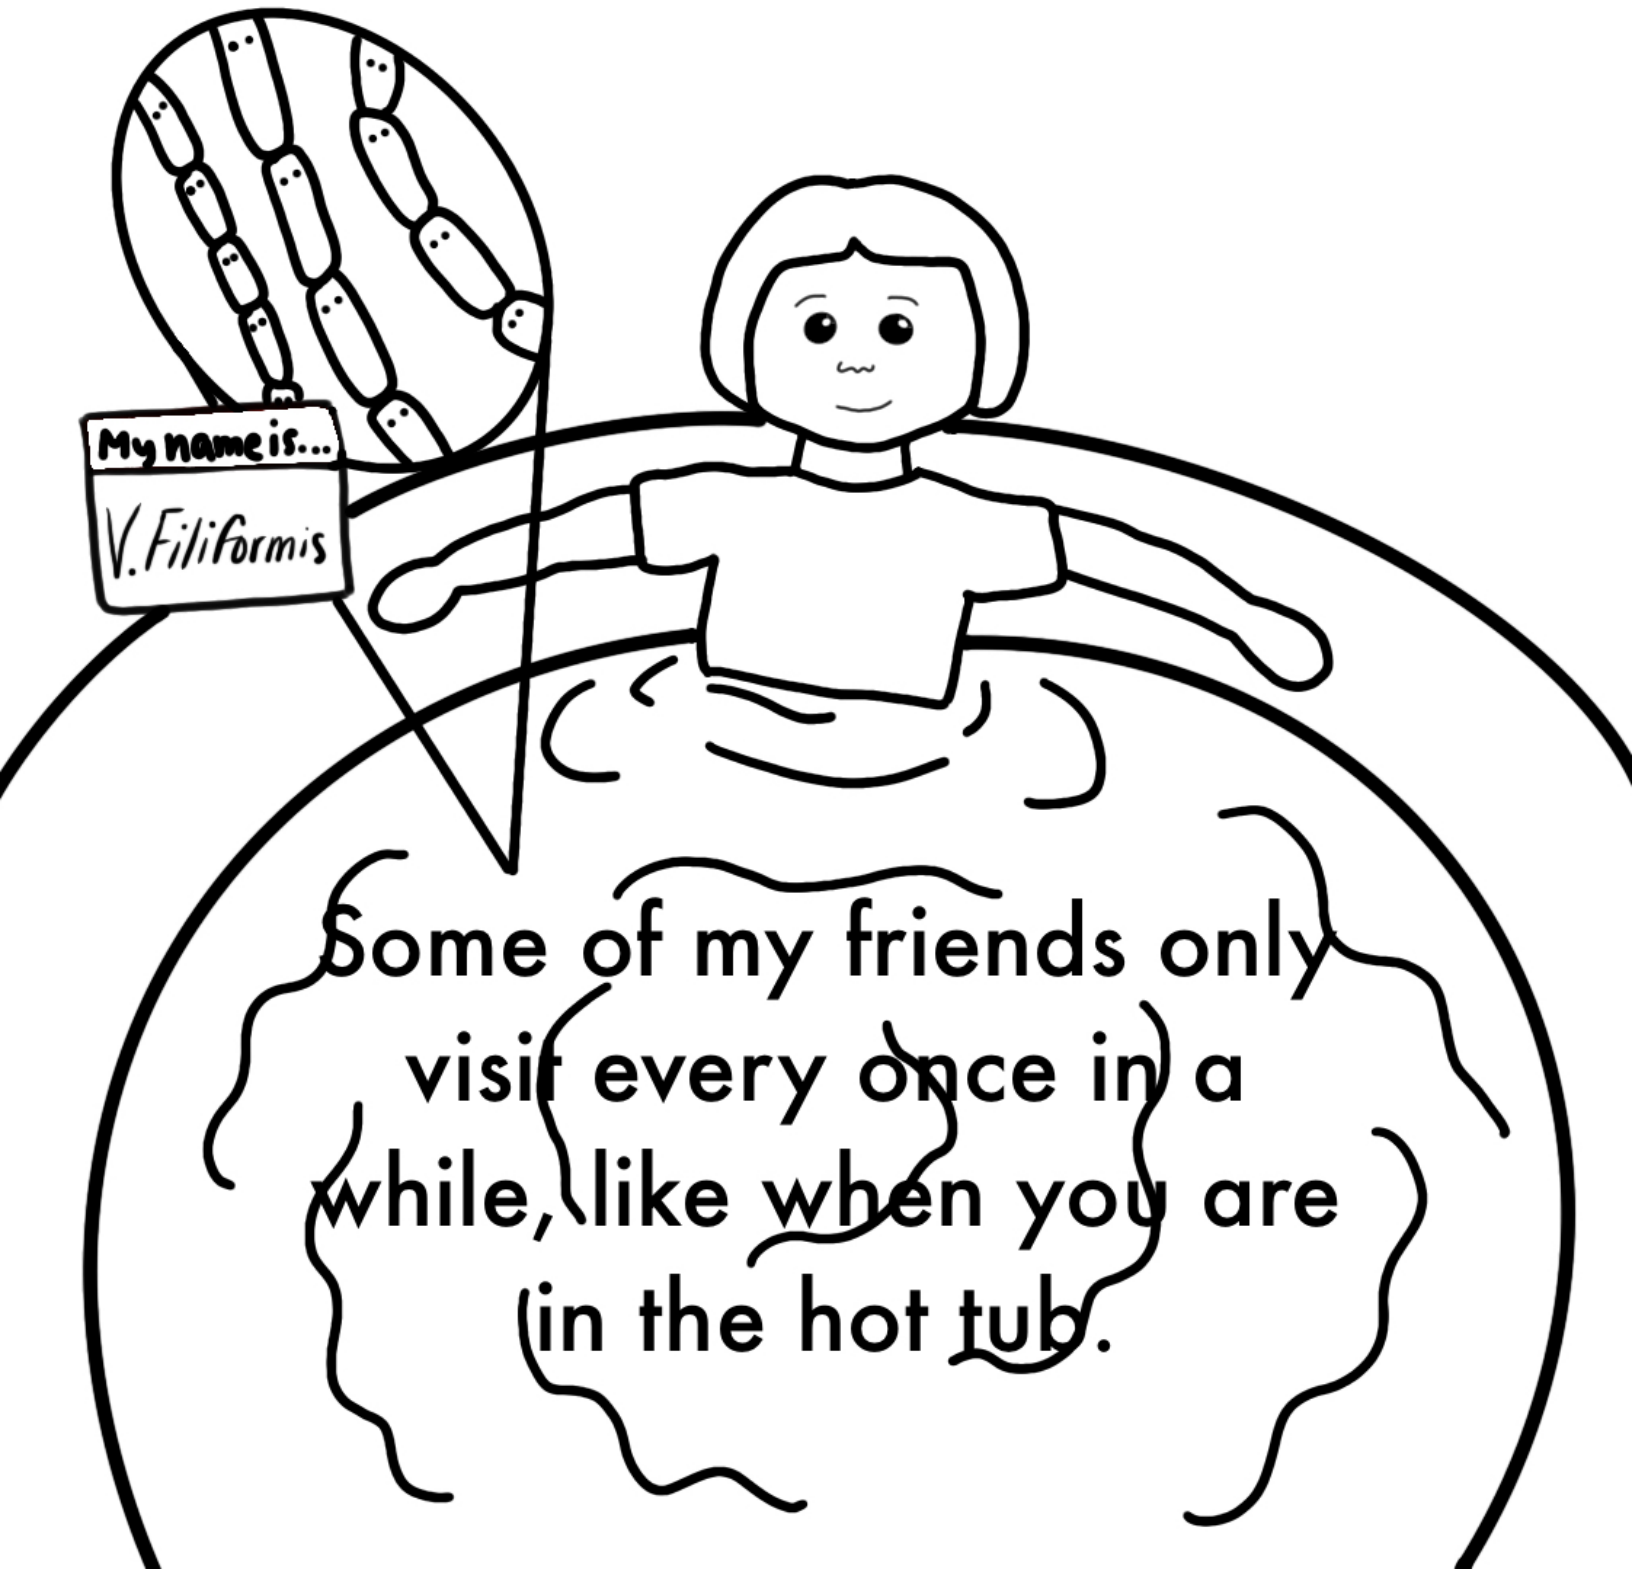

Most bacteria
have a hard time
living on your
nose , but we
love it here.

We love the moisture,
your lotion, and the salt.

In addition to my family, I have friends that live all over your body.

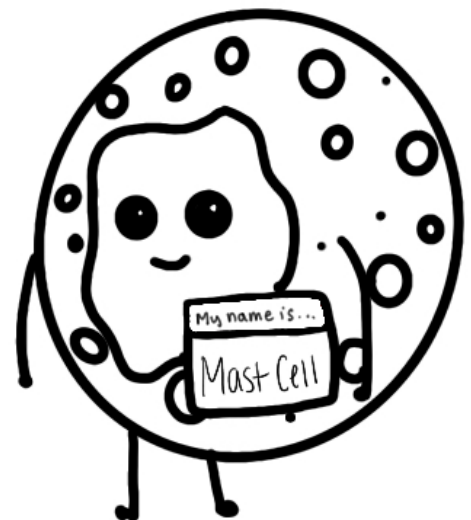

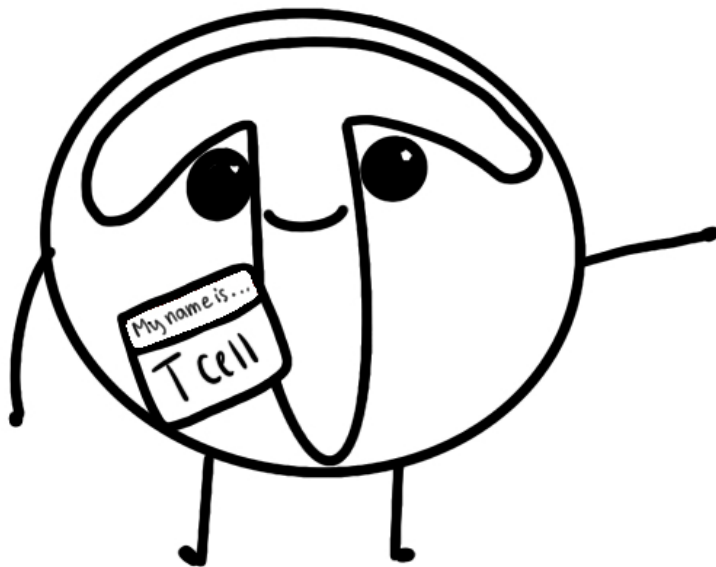

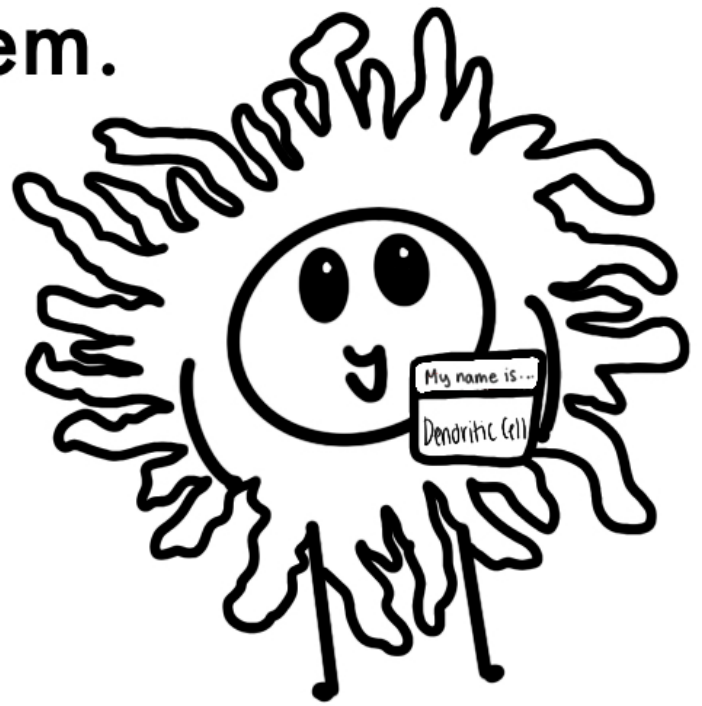

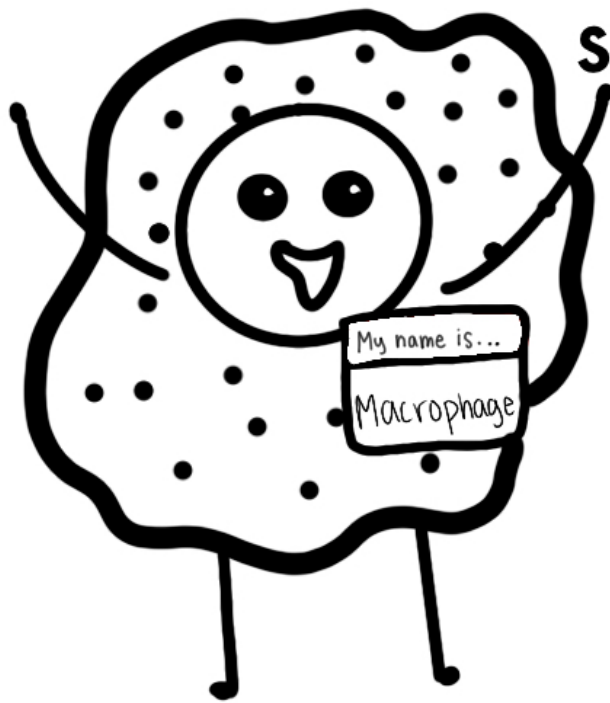

My name is...

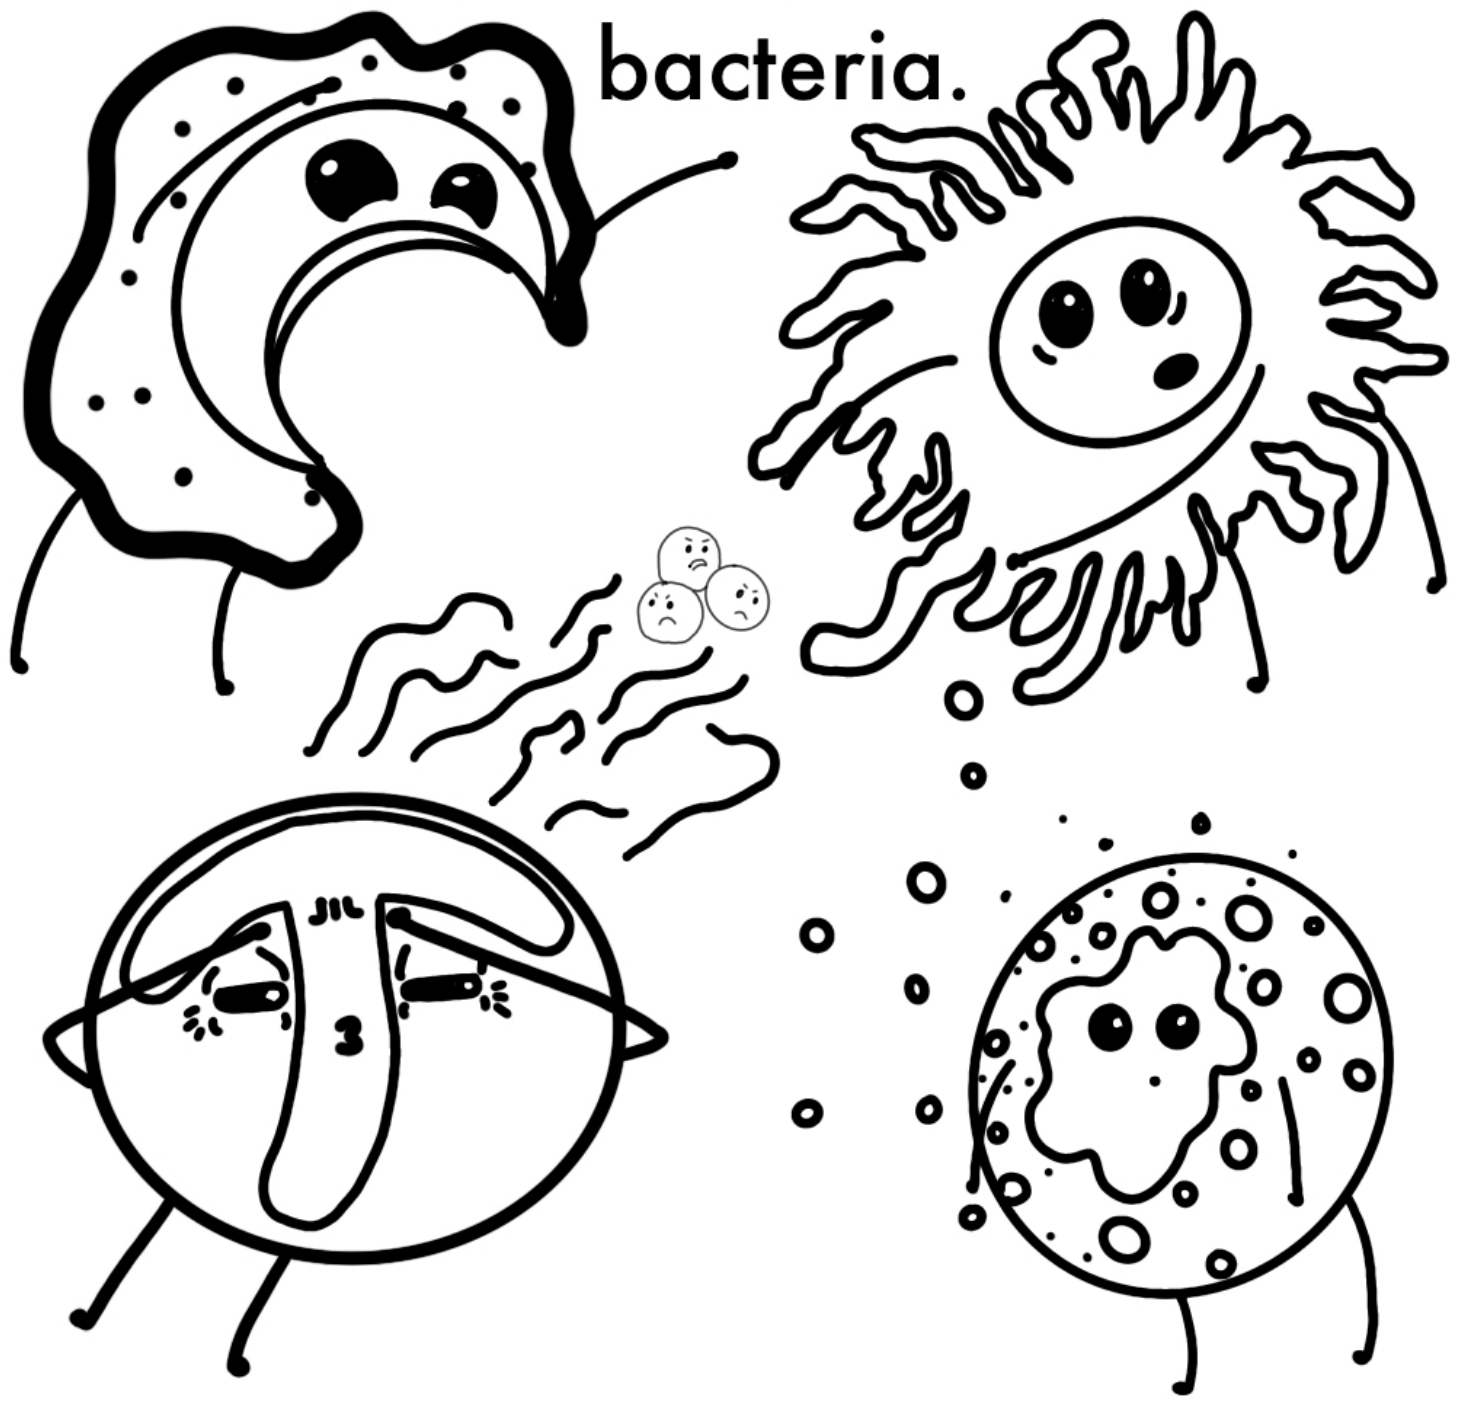

V. Filiformis

Some of my friends only
visit every once in a
while, like when you are
in the hot tub.

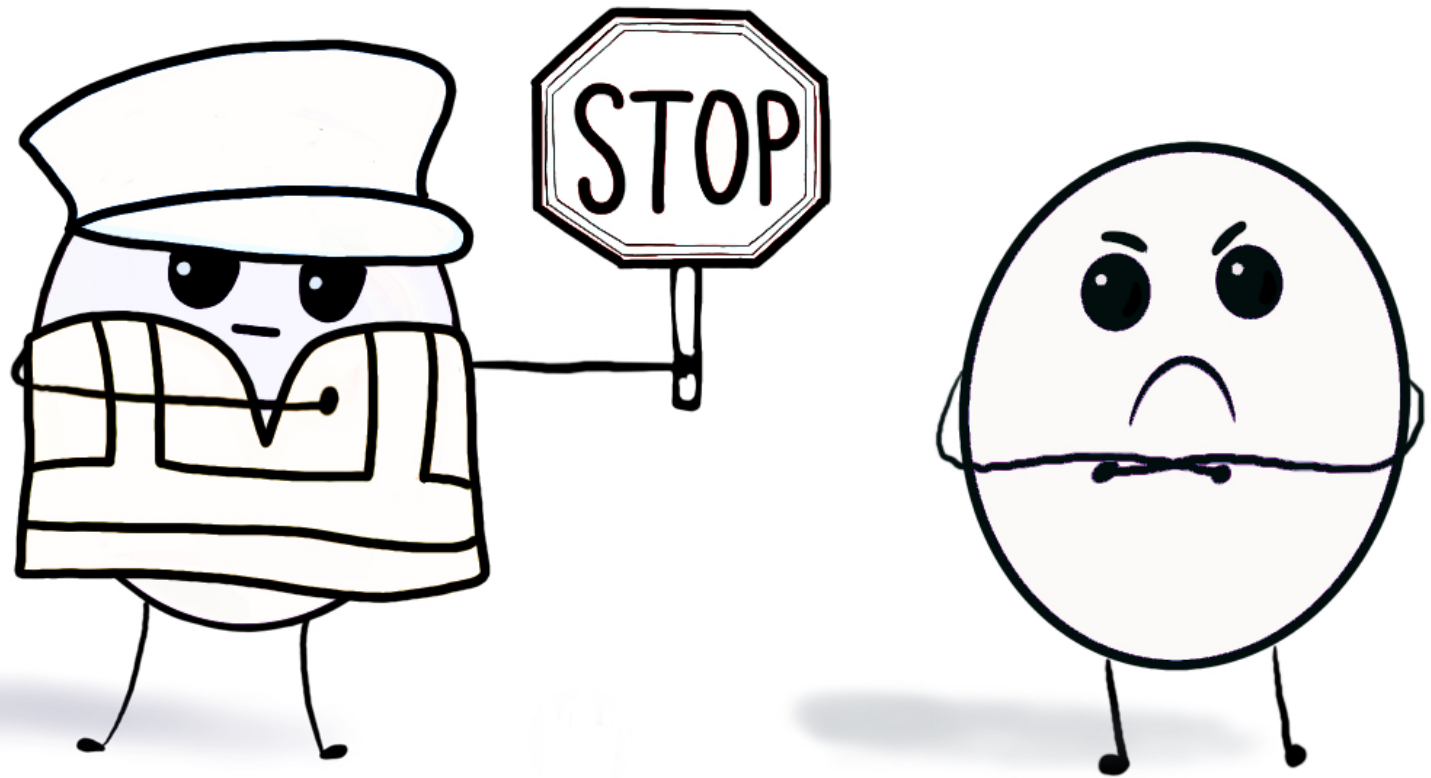

I am also friends with your immune system.

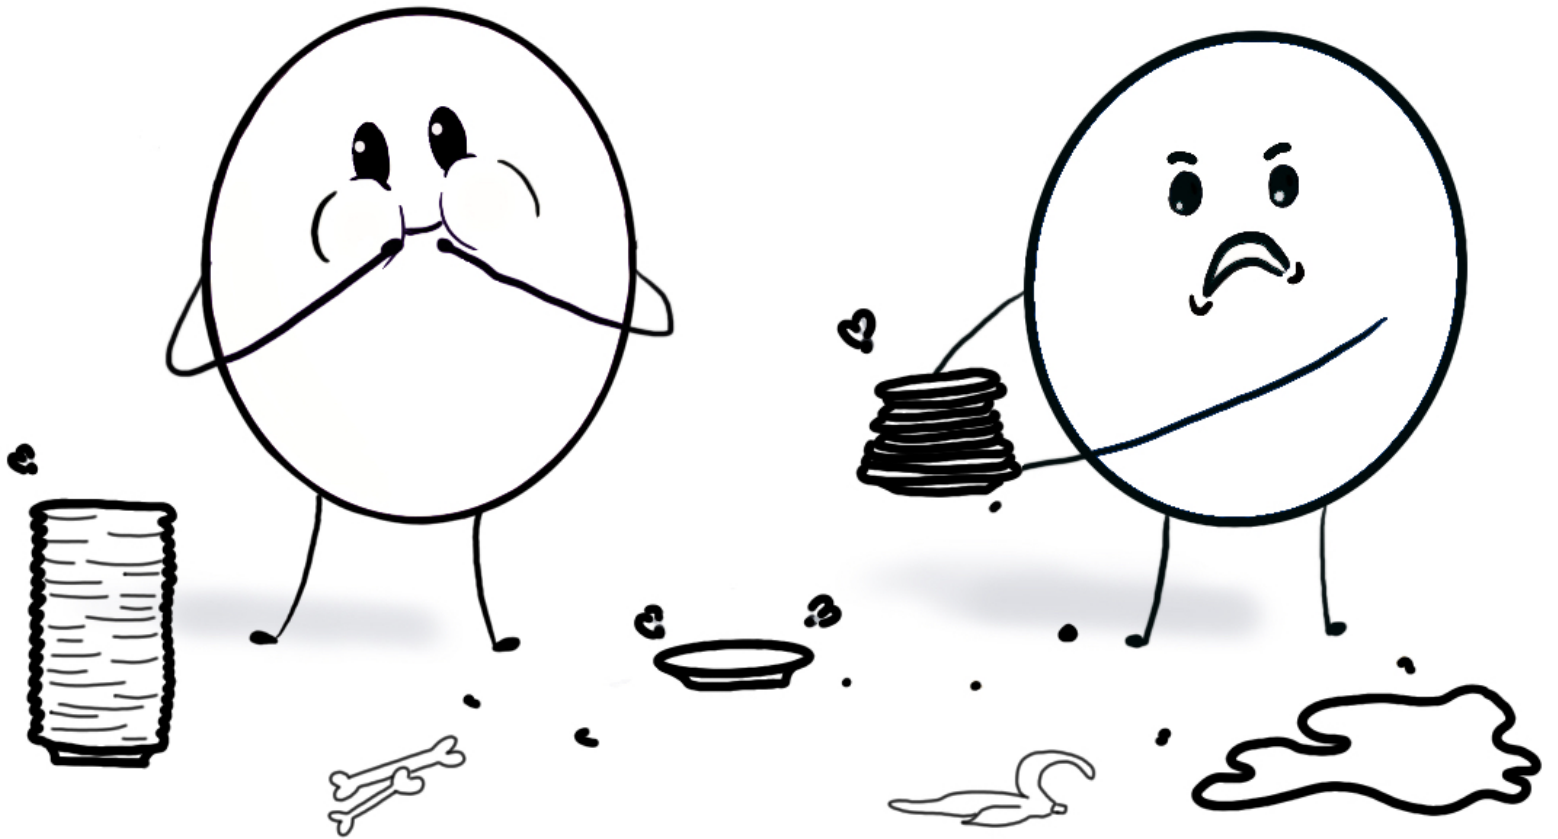

They protect you from bad bacteria.

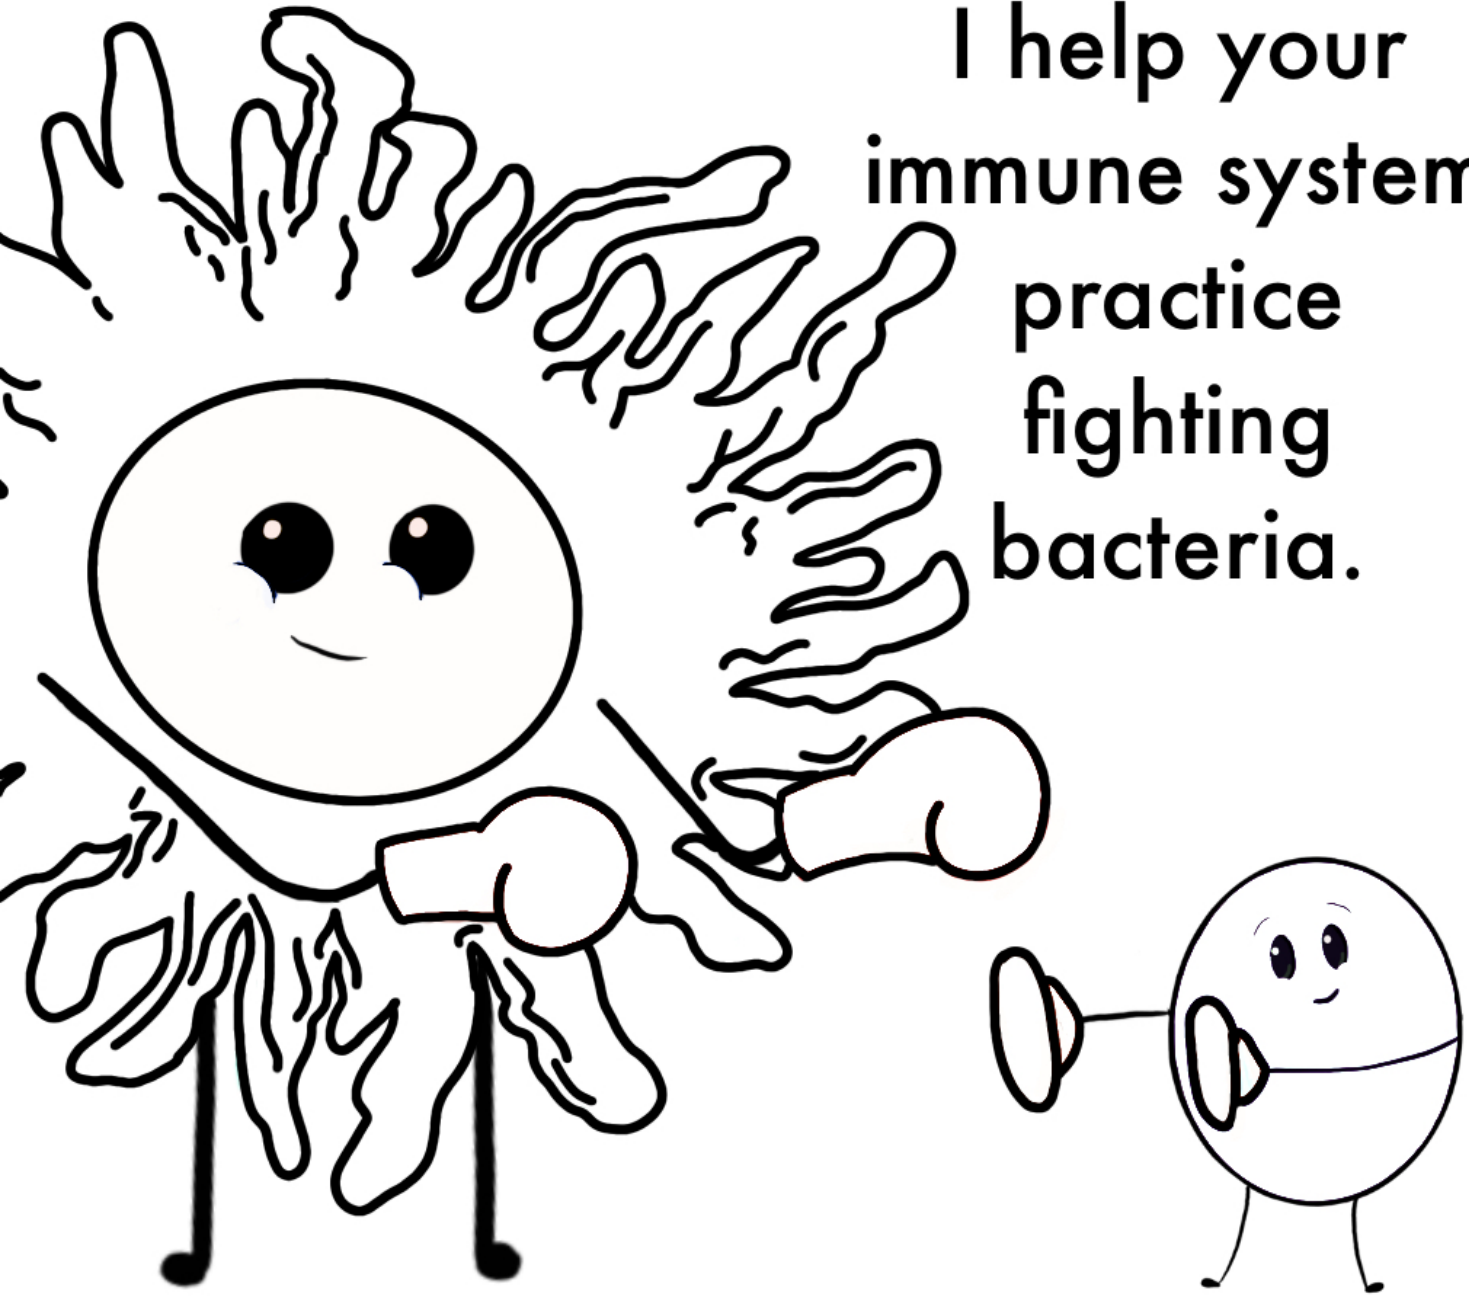

I stop other bacteria
from entering you body.

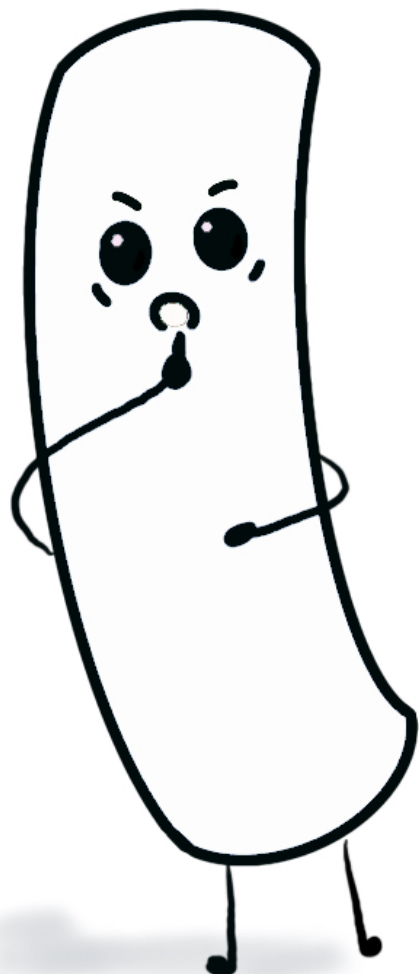

I make it a bad place
for other bacteria to
live.

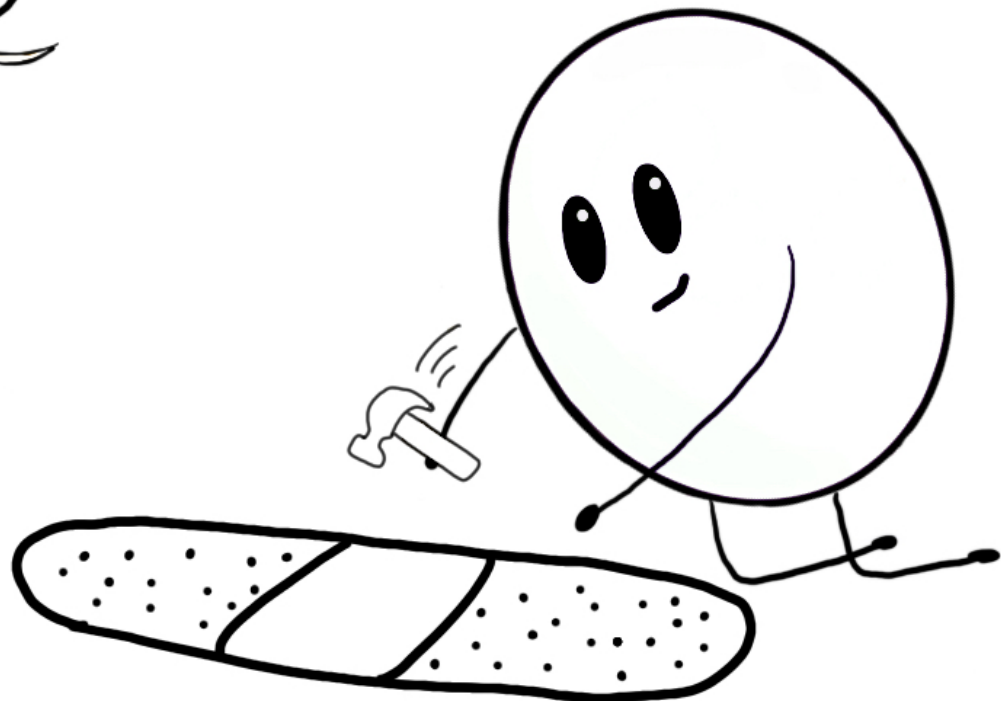

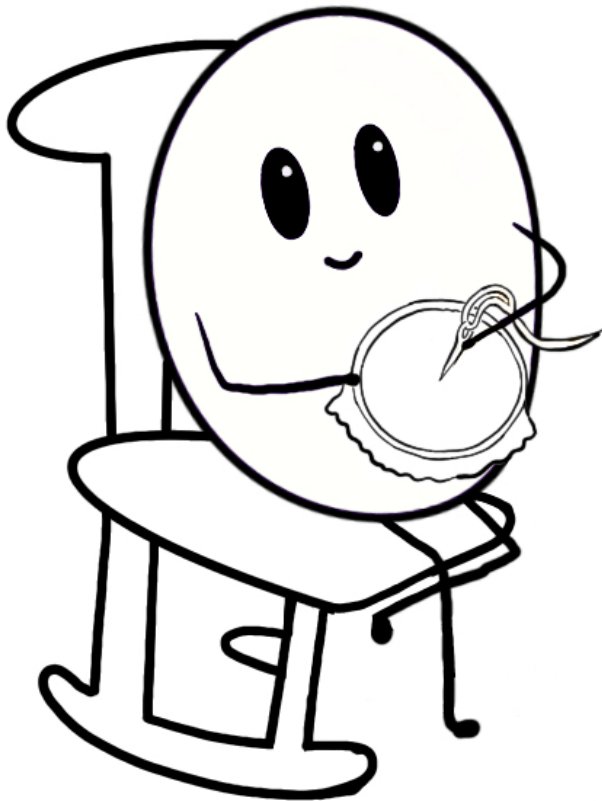

I help your
immune system
practice
fighting
bacteria.

I call your immune system when bad bacteria come in.

I also make things that
help heal cuts in your
skin.

**My friends and I do our
best to help protect you.**
